| Course Title: | M/J Accelerated Mathematics Grade 7 |
| :--- | :--- |
| Course Number: | 1205050 |
|  | In grade 7 accelerated, instructional time will emphasize six areas: (1) representing numbers in scientific notation and <br> extending the set of numbers to the system of real numbers, which includes irrational numbers; (2) generating equivalent <br> numeric and algebraic expressions including using the Laws of Exponents; (3) creating and reasoning about linear <br> relationships including modeling an association in bivariate data with a linear equation; (4) solving linear equations, <br> inequalities and systems of linear equations; (5) developing an understanding of the concept of a function and (6) analyzing <br> two-dimensional figures, particularly triangles, using distance, angle and applying the Pythagorean Theorem. <br> Curricular content for all subjects must integrate critical-thinking, problem-solving, and workforce-literacy skills; <br> communication, reading, and writing skills; mathematics skills; collaboration skills; contextual and applied-learning skills; <br> technology-literacy skills; information and media-literacy skills; and civic-engagement skills. |
| General Notes: | Honors and Advanced Level Course Note: Accelerated courses require a greater demand on students through increased <br> academic rigor. Academic rigor is obtained through the application, analysis, evaluation, and creation of complex ideas that <br> are often abstract and multi-faceted. Students are challenged to think and collaborate critically on the content they are <br> learning. Honors level rigor will be achieved by increasing text complexity through text selection, focus on high-level <br> qualitative measures, and complexity of task. Instruction will be structured to give students a deeper understanding of <br> conceptual themes and organization within and across disciplines. Academic rigor is more than simply assigning to students a <br> greater quantity of work. |
| English Language Development ELD Standards Special Notes Section: <br> Teachers are required to provide listening, speaking, reading and writing instruction that allows English language learners <br> (ELL) to communicate information, ideas and concepts for academic success in the content area of Mathematics. For the given |  |
| level of English language proficiency and with visual, graphic, or interactive support, students will interact with grade level |  |
| words, expressions, sentences and discourse to process or produce language necessary for academic success. The ELD |  |
| standard should specify a relevant content area concept or topic of study chosen by curriculum developers and teachers which |  |
| maximizes an ELL's need for communication and social skills. To access an ELL supporting document which delineates |  |
| performance definitions and descriptors, please click on the following link: |  |

Florida's Benchmarks for Excellent Student Thinking (B.E.S.T.) Standards: 7 Mathematical Thinking and Reasoning Standards, 57 Mathematics Benchmarks, 6 English Language Arts Benchmarks and 1 English Language Development Benchmark

| 7 Mathematical Thinking and Reasoning Standards |  | Textbook Section |
| :---: | :---: | :---: |
| MA.K12.MTR.1.1: | Mathematicians who participate in effortful learning both individually and with others: <br> - Analyze the problem in a way that makes sense given the task. <br> - Ask questions that will help with solving the task. <br> - Build perseverance by modifying methods as needed while solving a challenging task. <br> - Stay engaged and maintain a positive mindset when working to solve tasks. <br> - Help and support each other when attempting a new method or approach. <br> Clarifications: <br> Teachers who encourage students to participate actively in effortful learning both individually and with others: <br> - Cultivate a community of growth mindset learners. <br> - Foster perseverance in students by choosing tasks that are challenging. <br> - Develop students' ability to analyze and problem solve. <br> - Recognize students' effort when solving challenging problems. | Incorporated Throughout |
| MA.K12.MTR.2.1: | Demonstrate understanding by representing problems in multiple ways. <br> Mathematicians who demonstrate understanding by representing problems in multiple ways: <br> - Build understanding through modeling and using manipulatives. <br> - Represent solutions to problems in multiple ways using objects, drawings, tables, graphs and equations. <br> - Progress from modeling problems with objects and drawings to using algorithms and equations. <br> - Express connections between concepts and representations. <br> - Choose a representation based on the given context or purpose. <br> Clarifications: <br> Teachers who encourage students to demonstrate understanding by representing problems in multiple ways: <br> - Help students make connections between concepts and representations. <br> - Provide opportunities for students to use manipulatives when investigating concepts. <br> - Guide students from concrete to pictorial to abstract representations as understanding progresses. <br> - Show students that various representations can have different purposes and can be useful in different situations. | Incorporated Throughout |
| MA.K12.MTR.3.1: | Complete tasks with mathematical fluency. <br> Mathematicians who complete tasks with mathematical fluency: <br> - Select efficient and appropriate methods for solving problems within the given context. <br> - Maintain flexibility and accuracy while performing procedures and mental calculations. <br> - Complete tasks accurately and with confidence. | Incorporated Throughout |

|  | - Adapt procedures to apply them to a new context. <br> - Use feedback to improve efficiency when performing calculations. <br> Clarifications: <br> Teachers who encourage students to complete tasks with mathematical fluency: <br> - Provide students with the flexibility to solve problems by selecting a procedure that allows them to solve efficiently and accurately. <br> - Offer multiple opportunities for students to practice efficient and generalizable methods. <br> - Provide opportunities for students to reflect on the method they used and determine if a more efficient method could have been used. |  |
| :---: | :---: | :---: |
| MA.K12.MTR.4.1: | Engage in discussions that reflect on the mathematical thinking of self and others. <br> Mathematicians who engage in discussions that reflect on the mathematical thinking of self and others: <br> - Communicate mathematical ideas, vocabulary and methods effectively. <br> - Analyze the mathematical thinking of others. <br> - Compare the efficiency of a method to those expressed by others. <br> - Recognize errors and suggest how to correctly solve the task. <br> - Justify results by explaining methods and processes. <br> - Construct possible arguments based on evidence. <br> Clarifications: <br> Teachers who encourage students to engage in discussions that reflect on the mathematical thinking of self and others: <br> - Establish a culture in which students ask questions of the teacher and their peers, and error is an opportunity for learning. <br> - Create opportunities for students to discuss their thinking with peers. <br> - Select, sequence and present student work to advance and deepen understanding of correct and increasingly efficient methods. <br> - Develop students' ability to justify methods and compare their responses to the responses of their peers. | Incorporated Throughout |
| MA.K12.MTR.5.1: | Use patterns and structure to help understand and connect mathematical concepts. <br> Mathematicians who use patterns and structure to help understand and connect mathematical concepts: <br> - Focus on relevant details within a problem. <br> - Create plans and procedures to logically order events, steps or ideas to solve problems. <br> - Decompose a complex problem into manageable parts. <br> - Relate previously learned concepts to new concepts. <br> - Look for similarities among problems. <br> - Connect solutions of problems to more complicated large-scale situations. | Incorporated Throughout |

|  | Clarifications: <br> Teachers who encourage students to use patterns and structure to help understand and connect mathematical concepts: <br> - Help students recognize the patterns in the world around them and connect these patterns to mathematical concepts. <br> - Support students to develop generalizations based on the similarities found among problems. <br> - Provide opportunities for students to create plans and procedures to solve problems. <br> - Develop students' ability to construct relationships between their current understanding and more sophisticated ways of thinking. |  |
| :---: | :---: | :---: |
| MA.K12.MTR.6.1: | Assess the reasonableness of solutions. <br> Mathematicians who assess the reasonableness of solutions: <br> - Estimate to discover possible solutions. <br> - Use benchmark quantities to determine if a solution makes sense. <br> - Check calculations when solving problems. <br> - Verify possible solutions by explaining the methods used. <br> - Evaluate results based on the given context. <br> Clarifications: <br> Teachers who encourage students to assess the reasonableness of solutions: <br> - Have students estimate or predict solutions prior to solving. <br> - Prompt students to continually ask, "Does this solution make sense? How do you know?" <br> - Reinforce that students check their work as they progress within and after a task. <br> - Strengthen students' ability to verify solutions through justifications. | Incorporated Throughout |
| MA.K12.MTR.7.1: | Apply mathematics to real-world contexts. <br> Mathematicians who apply mathematics to real-world contexts: <br> - Connect mathematical concepts to everyday experiences. <br> - Use models and methods to understand, represent and solve problems. <br> - Perform investigations to gather data or determine if a method is appropriate. • Redesign models and methods to improve accuracy or efficiency. <br> Clarifications: <br> Teachers who encourage students to apply mathematics to real-world contexts: <br> - Provide opportunities for students to create models, both concrete and abstract, and perform investigations. <br> - Challenge students to question the accuracy of their models and methods. <br> - Support students as they validate conclusions by comparing them to the given situation. <br> - Indicate how various concepts can be applied to other disciplines. | Incorporated Throughout |

| 57 B.E.S.T. Mathematics Benchmarks | Textbook <br> Section |  |
| :--- | :--- | :--- |
|  | Write and solve two-step equations in one variable within a mathematical or real-world context, where all terms <br> are rational numbers. <br> Clarifications: <br> Clarification 1: Instruction focuses the application of the properties of equality. Refer to Properties of Operations, <br> Equality and Inequality (Appendix D). | $3-1,3-2$ |
| Clarification 2: Instruction includes equations in the forms $p x \pm q=r$ and $p(x \pm q)=r$, where $p, q$ and $r$ are <br> specific rational numbers. <br> Clarification 3: Problems include linear equations where the variable may be on either side of the equal sign. |  | $4-4,4-5$ |
| MA.7.AR.3.3: | Solve mathematical and real-world problems involving the conversion of units across different measurement <br> systems. | Determine whether two quantities have a proportional relationship by examining a table, graph or written <br> description. <br> Clarifications: <br> Clarification 1: Instruction focuses on the connection to ratios and on the constant of proportionality, which is the <br> ratio between two quantities in a proportional relationship. |
| MA.7.AR.4.1: | Determine the constant of proportionality within a mathematical or real-world context given a table, graph or <br> written description of a proportional relationship. | $4-4-2,4-4,4,4-5$ |
| MA.7.AR.4.2: | Given a mathematical or real-world context, graph proportional relationships from a table, equation or a written <br> description. <br> Clarifications: <br> Clarification 1: Instruction includes equations of proportional relationships in the form of $y=p x$, where $p$ is the <br> constant of proportionality. | $4-3$ |
| MA.7.AR.4.4: | Given any representation of a proportional relationship, translate the representation to a written description, table <br> or equation. <br> Clarifications: <br> Clarification 1: Given representations are limited to a written description, graph, table or equation. <br> Clarification 2: Instruction includes equations of proportional relationships in the form of $y=p x$, where $p$ is the <br> constant of proportionality. | $4-3$ |
| MA.7.AR.4.5: | Solve real-world problems involving proportional relationships. | $4-5$ |

| MA.7.DP.1.4: | Use proportional reasoning to construct, display and interpret data in circle graphs. <br> Clarifications: <br> Clarification 1: Data is limited to no more than 6 categories. | $10-1$ |
| :--- | :--- | :--- |
| MA.7.DP.1.5: | Given a real-world numerical or categorical data set, choose and create an appropriate graphical representation. <br> Clarifications: <br> Clarification 1: Graphical representations are limited to histograms, bar charts, circle graphs, line plots, box plots <br> and stem-and-leaf plots. | $10-2$ |
| MA.7.GR.1.3: | Explore the proportional relationship between circumferences and diameters of circles. Apply a formula for the <br> circumference of a circle to solve mathematical and real-world problems. <br> Clarifications: <br> Clarification 1: Instruction includes the exploration and analysis of circular objects to examine the proportional <br> relationship between circumference and diameter and arrive at an approximation of pi $(\pi)$ as the constant of <br> proportionality. <br> Clarification 2: Solutions may be represented in terms of pi $(\pi)$ or approximately. | $7-1$ |
| MA.7.GR.1.4: | Explore and apply a formula to find the area of a circle to solve mathematical and real-world problems. <br> Clarifications: <br> Clarification 1: Instruction focuses on the connection between formulas for the area of a rectangle and the area of a <br> circle. <br> Clarification 2: Problem types include finding areas of fractional parts of a circle. <br> Clarification 3: Solutions may be represented in terms of pi $(\pi)$ or approximately. | $7-2$ |
|  | Solve mathematical and real-world problems involving dimensions and areas of geometric figures, including scale <br> drawings and scale factors. <br> Clarifications: <br> Clarification 1: Instruction focuses on seeing the scale factor as a constant of proportionality between <br> corresponding lengths in the scale drawing and the original object. <br> Clarification 2: Instruction includes the understanding that if the scaling factor is $k$, then the constant of <br> proportionality between corresponding areas is $k^{2}$. <br> Clarification 3: Problem types include finding the scale factor given a set of dimensions as well as finding <br> dimensions when given a scale factor. | $7-3$ |
| MA.7.GR.1.5: | Given a mathematical or real-world context, find the surface area of a right circular cylinder using the figure's net. <br> Clarifications: <br> Clarification 1: Instruction focuses on representing a right circular cylinder with its net and on the connection <br> between surface area of a figure and its net. <br> Clarification 2: Within this benchmark, the expectation is to find the surface area when given a net or when given <br> a three-dimensional figure. | $7-4$ |
| MA.7.GR.2.1: |  |  |

|  | Clarification 3: Within this benchmark, the expectation is not to memorize the surface area formula for a right circular cylinder. <br> Clarification 4: Solutions may be represented in terms of pi $(\pi)$ or approximately. |  |
| :---: | :---: | :---: |
| MA.7.GR.2.2: | Solve real-world problems involving surface area of right circular cylinders. <br> Clarifications: <br> Clarification 1: Within this benchmark, the expectation is not to memorize the surface area formula for a right circular cylinder or to find radius as a missing dimension. <br> Clarification 2: Solutions may be represented in terms of pi $(\pi)$ or approximately. | 7-4 |
| MA.7.GR.2.3: | Solve mathematical and real-world problems involving volume of right circular cylinders. <br> Clarifications: <br> Clarification 1: Within this benchmark, the expectation is not to memorize the volume formula for a right circular cylinder or to find radius as a missing dimension. <br> Clarification 2: Solutions may be represented in terms of pi $(\pi)$ or approximately. | 7-5 |
| MA.7.NSO.1.1: | Know and apply the Laws of Exponents to evaluate numerical expressions and generate equivalent numerical expressions, limited to whole-number exponents and rational number bases. <br> Clarifications: <br> Clarification 1: Instruction focuses on building the Laws of Exponents from specific examples. Refer to the K-12 Formulas (Appendix E) for the Laws of Exponents. <br> Clarification 2: Problems in the form must result in a whole-number value for $p$. | 2-1, 2-2 |
| MA.7.NSO.1.2: | Rewrite rational numbers in different but equivalent forms including fractions, mixed numbers, repeating decimals and percentages to solve mathematical and real-world problems. | 1-1, |
| MA.8.AR.1.1: | Apply the Laws of Exponents to generate equivalent algebraic expressions, limited to integer exponents and monomial bases. <br> Clarifications: <br> Clarification 1: Refer to the K-12 Formulas (Appendix E) for the Laws of Exponents. | 2-7 |
| MA.8.AR.1.2: | Apply properties of operations to multiply two linear expressions with rational coefficients. <br> Clarifications: <br> Clarification 1: Problems are limited to products where at least one of the factors is a monomial. <br> Clarification 2: Refer to Properties of Operations, Equality and Inequality (Appendix D). | 2-8 |
| MA.8.AR.1.3: | Rewrite the sum of two algebraic expressions having a common monomial factor as a common factor multiplied by the sum of two algebraic expressions. | 2-9 |

| MA.8.AR.2.1: | Solve multi-step linear equations in one variable, with rational number coefficients. Include equations with variables on both sides. <br> Clarifications: <br> Clarification 1: Problem types include examples of one-variable linear equations that generate one solution, infinitely many solutions or no solution. | $\begin{array}{\|l\|} \hline 3-3,3-4, \\ 3-5,3-6 \end{array}$ |
| :---: | :---: | :---: |
| MA.8.AR.2.2: | Solve two-step linear inequalities in one variable and represent solutions algebraically and graphically. <br> Clarifications: <br> Clarification 1: Instruction includes inequalities in the forms $p x \pm q>r$ and $p(x \pm q)>r$, where $p, q$ and $r$ are specific rational numbers and where any inequality symbol can be represented. <br> Clarification 2: Problems include inequalities where the variable may be on either side of the inequality. | 3-7 |
| MA.8.AR.2.3: | Given an equation in the form of $x^{2}=p$ and $x^{3}=q$, where p is a whole number and $q$ is an integer, determine the real solutions. <br> Clarifications: <br> Clarification 1: Instruction focuses on understanding that when solving $x^{2}=p$, there is both a positive and negative solution. <br> Clarification 2: Within this benchmark, the expectation is to calculate square roots of perfect squares up to 225 and cube roots of perfect cubes from -125 to 125 . | 1-5 |
| MA.8.AR.3.1: | Determine if a linear relationship is also a proportional relationship. <br> Clarifications: <br> Clarification 1: Instruction focuses on the understanding that proportional relationships are linear relationships whose graph passes through the origin. <br> Clarification 2: Instruction includes the representation of relationships using tables, graphs, equations and written descriptions. | 5-1, 5-2, 5-3 |
| MA.8.AR.3.2: | Given a table, graph or written description of a linear relationship, determine the slope. <br> Clarifications: <br> Clarification 1: Problem types include cases where two points are given to determine the slope. <br> Clarification 2: Instruction includes making connections of slope to the constant of proportionality and to similar triangles represented on the coordinate plane. | 5-1, 5-2 |
| MA.8.AR.3.3: | Given a table, graph or written description of a linear relationship, write an equation in slope-intercept form. | 5-4 |
| MA.8.AR.3.4: | Given a mathematical or real-world context, graph a two-variable linear equation from a written description, a table or an equation in slope-intercept form. | 5-4, |

|  | Given a real-world context, determine and interpret the slope and y-intercept of a two-variable linear equation from <br> a written description, a table, a graph or an equation in slope-intercept form. <br> Clarifications: <br> Clarification 1: Problems include conversions with temperature and equations of lines of fit in scatter plots. | $5-1,5-3$, <br> $5-4,5-5$, <br> $10-5$ |
| :--- | :--- | :--- |
| MA.8.AR.4.1: | Given a system of two linear equations and a specified set of possible solutions, determine which ordered pairs <br> satisfy the system of linear equations. <br> Clarifications: <br> Clarification 1: Instruction focuses on the understanding that a solution to a system of equations satisfies both <br> linear equations simultaneously. | $5-6$ |
| MA.8.AR.4.2: | Given a system of two linear equations represented graphically on the same coordinate plane, determine whether <br> there is one solution, no solution or infinitely many solutions. | $5-6$ |
| MA.8.AR.4.3: | Given a mathematical or real-world context, solve systems of two linear equations by graphing. <br> Clarifications: <br> Clarification 1: Instruction includes approximating non-integer solutions. <br> Clarification 2: Within this benchmark, it is the expectation to represent systems of linear equations in <br> slope-intercept form only. <br> Clarification 3: Instruction includes recognizing that parallel lines have the same slope. | $5-7$ <br> MA.8.DP.1.1:Given a set of real-world bivariate numerical data, construct a scatter plot or a line graph as appropriate for the <br> context. <br> Clarifications: <br> Clarification 1: Instruction includes recognizing similarities and differences between scatter plots and line graphs, <br> and on determining which is more appropriate as a representation of the data based on the context. <br> Clarification 2: Sets of data are limited to 20 points. |
| MA.8.DP.1.2: | Given a scatter plot within a real-world context, describe patterns of association. <br> Clarifications: <br> Clarification 1: Descriptions include outliers; positive or negative association; linear or nonlinear association; <br> strong or weak association. | $10-3$ |
| Given a scatter plot with a linear association, informally fit a straight line. <br> Clarifications: <br> Clarification 1: Instruction focuses on the connection to linear functions. <br> Clarification 2: Instruction includes using a variety of tools, including a ruler, to draw a line with approximately <br> the same number of points above and below the line. | $10-10-4$ |  |

| MA.8.DP.2.1: | Determine the sample space for a repeated experiment. <br> Clarifications: <br> Clarification 1: Instruction includes recording sample spaces for repeated experiments using organized lists, tables or tree diagrams. <br> Clarification 2: Experiments to be repeated are limited to tossing a fair coin, rolling a fair die, picking a card randomly from a deck with replacement, picking marbles randomly from a bag with replacement and spinning a fair spinner. <br> Clarification 3: Repetition of experiments is limited to two times except for tossing a coin. | 10-6 |
| :---: | :---: | :---: |
| MA.8.DP.2.2: | Find the theoretical probability of an event related to a repeated experiment. <br> Clarifications: <br> Clarification 1: Instruction includes representing probability as a fraction, percentage or decimal. <br> Clarification 2: Experiments to be repeated are limited to tossing a fair coin, rolling a fair die, picking a card randomly from a deck with replacement, picking marbles randomly from a bag with replacement and spinning a fair spinner. <br> Clarification 3: Repetition of experiments is limited to two times except for tossing a coin. | 10-7 |
| MA.8.DP.2.3: | Solve real-world problems involving probabilities related to single or repeated experiments, including making predictions based on theoretical probability. <br> Clarifications: <br> Clarification 1: Instruction includes making connections to proportional relationships and representing probability as a fraction, percentage or decimal. <br> Clarification 2: Experiments to be repeated are limited to tossing a fair coin, rolling a fair die, picking a card randomly from a deck with replacement, picking marbles randomly from a bag with replacement and spinning a fair spinner. <br> Clarification 3: Repetition of experiments is limited to two times except for tossing a coin. | 10-7 |
| MA.8.F.1.1: | Given a set of ordered pairs, a table, a graph or mapping diagram, determine whether the relationship is a function. Identify the domain and range of the relation. <br> Clarifications: <br> Clarification 1: Instruction includes referring to the input as the independent variable and the output as the dependent variable. <br> Clarification 2: Within this benchmark, it is the expectation to represent domain and range as a list of numbers or as an inequality. | 6-1, 6-2 |
| MA.8.F.1.2: | Given a function defined by a graph or an equation, determine whether the function is a linear function. Given an input-output table, determine whether it could represent a linear function. <br> Clarifications: <br> Clarification 1: Instruction includes recognizing that a table may not determine a function. | 6-2 |

|  | Analyze a real-world written description or graphical representation of a functional relationship between two <br> quantities and identify where the function is increasing, decreasing or constant. <br> Clarifications: <br> Clarification 1: Problem types are limited to continuous functions. <br> Clarification 2: Analysis includes writing a description of a graphical representation or sketching a graph from a <br> written description. | $6-3,6-4,6-5$ |
| :--- | :--- | :--- |
|  | Apply the Pythagorean Theorem to solve mathematical and real-world problems involving unknown side lengths <br> in right triangles. <br> Clarifications: <br> Clarification 1: Instruction includes exploring right triangles with natural-number side lengths to illustrate the <br> Pythagorean Theorem. <br> Clarification 2: Within this benchmark, the expectation is to memorize the Pythagorean Theorem. <br> Clarification 3: Radicands are limited to whole numbers up to 225. | $8-1,8-2,8-3$ |
| MA.8.GR.1.2: | Apply the Pythagorean Theorem to solve mathematical and real-world problems involving the distance between <br> two points in a coordinate plane. <br> Clarifications: <br> Clarification 1: Instruction includes making connections between distance on the coordinate plane and right <br> triangles. <br> Clarification 2: Within this benchmark, the expectation is to memorize the Pythagorean Theorem. It is not the <br> expectation to use the distance formula. <br> Clarification 3: Radicands are limited to whole numbers up to 225. | $8-4$ |
| MA.8.GR.1.3: | Use the Triangle Inequality Theorem to determine if a triangle can be formed from a given set of sides. Use the <br> converse of the Pythagorean Theorem to determine if a right triangle can be formed from a given set of sides. | $8-3,8-5$ |
| MA.8.GR.1.4: | Solve mathematical problems involving the relationships between supplementary, complementary, vertical or <br> adjacent angles. | $8-6$ |
| MA.8.GR.1.5: | Solve problems involving the relationships of interior and exterior angles of a triangle. <br> Clarifications: <br> Clarification 1: Problems include using the Triangle Sum Theorem and representing angle measures as algebraic <br> expressions. | Develop and use formulas for the sums of the interior angles of regular polygons by decomposing them into <br> triangles. <br> Clarifications: <br> Clarification 1: Problems include representing angle measures as algebraic expressions. |
| 8-7. | 8 |  |

| MA.8.GR.2.1: | Given a preimage and image generated by a single transformation, identify the transformation that describes the relationship. <br> Clarifications: <br> Clarification 1: Within this benchmark, transformations are limited to reflections, translations or rotations of images. <br> Clarification 2: Instruction focuses on the preservation of congruence so that a figure maps onto a copy of itself. | 9-1, 9-2, 9-3 |
| :---: | :---: | :---: |
| MA.8.GR.2.2: | Given a preimage and image generated by a single dilation, identify the scale factor that describes the relationship. <br> Clarifications: <br> Clarification 1: Instruction includes the connection to scale drawings and proportions. <br> Clarification 2: Instruction focuses on the preservation of similarity and the lack of preservation of congruence when a figure maps onto a scaled copy of itself, unless the scaling factor is 1. | 9-4 |
| MA.8.GR.2.3: | Describe and apply the effect of a single transformation on two-dimensional figures using coordinates and the coordinate plane. <br> Clarifications: <br> Clarification 1: Within this benchmark, transformations are limited to reflections, translations, rotations or dilations of images. <br> Clarification 2: Lines of reflection are limited to the x -axis, y -axis or lines parallel to the axes. <br> Clarification 3: Rotations must be about the origin and are limited to $90^{\circ}, 180^{\circ}, 270^{\circ}$ or $360^{\circ}$. <br> Clarification 4: Dilations must be centered at the origin. | $\begin{array}{\|l\|} \hline 9-1,9-2, \\ 9-3,9-4 \end{array}$ |
| MA.8.GR.2.4: | Solve mathematical and real-world problems involving proportional relationships between similar triangles. | 9-5 |
| MA.8.NSO.1.1: | Extend previous understanding of rational numbers to define irrational numbers within the real number system. Locate an approximate value of a numerical expression involving irrational numbers on a number line. <br> Clarifications: <br> Clarification 1: Instruction includes the use of number line and rational number approximations, and recognizing pi $(\pi)$ as an irrational number. <br> Clarification 2: Within this benchmark, the expectation is to approximate numerical expressions involving one arithmetic operation and estimating square roots or $\mathrm{pi}(\pi)$. | 1-1, 1-3 |
| MA.8.NSO.1.2: | Plot, order and compare rational and irrational numbers, represented in various forms. <br> Clarifications: <br> Clarification 1: Within this benchmark, it is not the expectation to work with the number e. <br> Clarification 2: Within this benchmark, the expectation is to plot, order and compare square roots and cube roots. <br> Clarification 3: Within this benchmark, the expectation is to use symbols ( $<,>$ or $=$ ). | 1-1, 1-3, 1-4 |

|  | Extend previous understanding of the Laws of Exponents to include integer exponents. Apply the Laws of <br> Exponents to evaluate numerical expressions and generate equivalent numerical expressions, limited to integer <br> exponents and rational number bases, with procedural fluency. <br> Clarifications: <br> Clarification 1: Refer to the K-12 Formulas (Appendix E) for the Laws of Exponents. | $2-3$ |
| :--- | :--- | :--- |
| MA.8.NSO.1.4: | Express numbers in scientific notation to represent and approximate very large or very small quantities. Determine <br> how many times larger or smaller one number is compared to a second number. | $2-4,2-5,2-6$ |
| MA.8.NSO.1.5: | Add, subtract, multiply and divide numbers expressed in scientific notation with procedural fluency. <br> Clarifications: <br> Clarification 1: Within this benchmark, for addition and subtraction with numbers expressed in scientific notation, <br> exponents are limited to within 2 of each other. | $2-6$ |
|  | Solve real-world problems involving operations with numbers expressed in scientific notation. <br> Clarifications: <br> Clarification 1: Instruction includes recognizing the importance of significant digits when physical measurements <br> are involved. <br> Clarification 2: Within this benchmark, for addition and subtraction with numbers expressed in scientific notation, <br> exponents are limited to within 2 of each other. | $1-4$ |
| MA.8.NSO.1.6: | Solve multi-step mathematical and real-world problems involving the order of operations with rational numbers <br> including exponents and radicals. <br> Clarifications: <br> Clarification 1: Multi-step expressions are limited to 6 or fewer steps. <br> Clarification 2: Within this benchmark, the expectation is to simplify radicals by factoring square roots of perfect <br> squares up to 225 and cube roots of perfect cubes from -125 to 125. | $1-4$ |

| 6 English Language Arts Benchmarks and 1 English Language Development Benchmark | Textbook Section |  |
| :--- | :--- | :---: |
| ELA.K12.EE.1.1: | Cite evidence to explain and justify reasoning. <br> Clarifications: <br> 6-8 Students continue with previous skills and use a style guide to create a proper citation. | Incorporated <br> Throughout |
| ELA.K12.EE.2.1: | Read and comprehend grade-level complex texts proficiently. <br> Clarifications: <br> See Text Complexity for grade-level complexity bands and a text complexity rubric. | Incorporated <br> Throughout |
| ELA.K12.EE.3.1: | Make inferences to support comprehension. <br> Clarifications: <br> Students will make inferences before the words infer or inference are introduced. Kindergarten | Incorporated <br> Throughout |

|  | students will answer questions like "Why is the girl smiling?" or make predictions about what will <br> happen based on the title page. Students will use the terms and apply them in 2nd grade and <br> beyond. |  |
| :--- | :--- | :--- |
|  | Use appropriate collaborative techniques and active listening skills when engaging in discussions <br> in a variety of situations. <br> Clarifications: <br> ELA.K12.EE.4.1: <br> In grades 3-12, students engage in academic conversations discussing claims and justifying their <br> reasoning, refining and applying skills. Students build on ideas, propel the conversation, and <br> support claims and counterclaims with evidence. | Incorporated <br> Throughout |
| ELA.K12.EE.5.1: | Use the accepted rules governing a specific format to create quality work. <br> Clarifications: <br> Students will incorporate skills learned into work products to produce quality work. For students <br> to incorporate these skills appropriately, they must receive instruction. A 3rd grade student <br> creating a poster board display must have instruction in how to effectively present information to <br> do quality work. | Incorporated <br> Throughout |
| ELA.K12.EE.6.1: | Use appropriate voice and tone when speaking or writing. <br> Clarifications: <br> In 2nd grade and beyond, students practice appropriate social and academic language to discuss <br> texts. | Incorporated <br> Throughout |
| ELD.K12.ELL.MA.1: | English language learners communicate information, ideas and concepts necessary for academic <br> success in the content area of Mathematics. | Incorporated <br> Throughout |
