Florida's Benchmarks for Excellent Student Thinking (B.E.S.T.) Standards: 7 Mathematical Thinking and Reasoning Standards, 34 Mathematics Benchmarks, 6 English Language Arts Benchmarks and 2 English Language Development Benchmarks

| 7 Mathematical Thinking and Reasoning Standards |  | Textbook Section |
| :---: | :---: | :---: |
| MA.K12.MTR.1.1: | Mathematicians who participate in effortful learning both individually and with others: <br> - Analyze the problem in a way that makes sense given the task. <br> - Ask questions that will help with solving the task. <br> - Build perseverance by modifying methods as needed while solving a challenging task. <br> - Stay engaged and maintain a positive mindset when working to solve tasks. <br> - Help and support each other when attempting a new method or approach. <br> Clarifications: <br> Teachers who encourage students to participate actively in effortful learning both individually and with others: <br> - Cultivate a community of growth mindset learners. <br> - Foster perseverance in students by choosing tasks that are challenging. <br> - Develop students' ability to analyze and problem solve. <br> - Recognize students' effort when solving challenging problems. | Incorporated Throughout |
| MA.K12.MTR.2.1: | Demonstrate understanding by representing problems in multiple ways. <br> Mathematicians who demonstrate understanding by representing problems in multiple ways: <br> - Build understanding through modeling and using manipulatives. <br> - Represent solutions to problems in multiple ways using objects, drawings, tables, graphs and equations. <br> - Progress from modeling problems with objects and drawings to using algorithms and equations. <br> - Express connections between concepts and representations. <br> - Choose a representation based on the given context or purpose. <br> Clarifications: <br> Teachers who encourage students to demonstrate understanding by representing problems in multiple ways: <br> - Help students make connections between concepts and representations. <br> - Provide opportunities for students to use manipulatives when investigating concepts. <br> - Guide students from concrete to pictorial to abstract representations as understanding progresses. <br> - Show students that various representations can have different purposes and can be useful in different situations. | Incorporated Throughout |

| MA.K12.MTR.3.1: | Complete tasks with mathematical fluency. <br> Mathematicians who complete tasks with mathematical fluency: <br> - Select efficient and appropriate methods for solving problems within the given context. <br> - Maintain flexibility and accuracy while performing procedures and mental calculations. <br> - Complete tasks accurately and with confidence. <br> - Adapt procedures to apply them to a new context. <br> - Use feedback to improve efficiency when performing calculations. <br> Clarifications: <br> Teachers who encourage students to complete tasks with mathematical fluency: <br> - Provide students with the flexibility to solve problems by selecting a procedure that allows them to solve efficiently and accurately. <br> - Offer multiple opportunities for students to practice efficient and generalizable methods. <br> - Provide opportunities for students to reflect on the method they used and determine if a more efficient method could have been used. | Incorporated Throughout |
| :---: | :---: | :---: |
| MA.K12.MTR.4.1: | Engage in discussions that reflect on the mathematical thinking of self and others. <br> Mathematicians who engage in discussions that reflect on the mathematical thinking of self and others: <br> - Communicate mathematical ideas, vocabulary and methods effectively. <br> - Analyze the mathematical thinking of others. <br> - Compare the efficiency of a method to those expressed by others. <br> - Recognize errors and suggest how to correctly solve the task. <br> - Justify results by explaining methods and processes. <br> - Construct possible arguments based on evidence. <br> Clarifications: <br> Teachers who encourage students to engage in discussions that reflect on the mathematical thinking of self and others: <br> - Establish a culture in which students ask questions of the teacher and their peers, and error is an opportunity for learning. <br> - Create opportunities for students to discuss their thinking with peers. <br> - Select, sequence and present student work to advance and deepen understanding of correct and increasingly efficient methods. <br> - Develop students' ability to justify methods and compare their responses to the responses of their peers. | Incorporated Throughout |

| MA.K12.MTR.5.1: | Use patterns and structure to help understand and connect mathematical concepts. <br> Mathematicians who use patterns and structure to help understand and connect mathematical concepts: <br> - Focus on relevant details within a problem. <br> - Create plans and procedures to logically order events, steps or ideas to solve problems. <br> - Decompose a complex problem into manageable parts. <br> - Relate previously learned concepts to new concepts. <br> - Look for similarities among problems. <br> - Connect solutions of problems to more complicated large-scale situations. <br> Clarifications: <br> Teachers who encourage students to use patterns and structure to help understand and connect mathematical concepts: <br> - Help students recognize the patterns in the world around them and connect these patterns to mathematical concepts. <br> - Support students to develop generalizations based on the similarities found among problems. <br> - Provide opportunities for students to create plans and procedures to solve problems. <br> - Develop students' ability to construct relationships between their current understanding and more sophisticated ways of thinking. | Incorporated Throughout |
| :---: | :---: | :---: |
| MA.K12.MTR.6.1: | Assess the reasonableness of solutions. <br> Mathematicians who assess the reasonableness of solutions: <br> - Estimate to discover possible solutions. <br> - Use benchmark quantities to determine if a solution makes sense. <br> - Check calculations when solving problems. <br> - Verify possible solutions by explaining the methods used. <br> - Evaluate results based on the given context. <br> Clarifications: <br> Teachers who encourage students to assess the reasonableness of solutions: <br> - Have students estimate or predict solutions prior to solving. <br> - Prompt students to continually ask, "Does this solution make sense? How do you know?" <br> - Reinforce that students check their work as they progress within and after a task. <br> - Strengthen students' ability to verify solutions through justifications. | Incorporated Throughout |
| MA.K12.MTR.7.1: | Apply mathematics to real-world contexts. Mathematicians who apply mathematics to real-world contexts: <br> - Connect mathematical concepts to everyday experiences. <br> - Use models and methods to understand, represent and solve problems. | Incorporated Throughout |

|  | - Perform investigations to gather data or determine if a method is appropriate. • Redesign models and methods to improve accuracy or efficiency. <br> Clarifications: <br> Teachers who encourage students to apply mathematics to real-world contexts: <br> - Provide opportunities for students to create models, both concrete and abstract, and perform investigations. <br> - Challenge students to question the accuracy of their models and methods. <br> - Support students as they validate conclusions by comparing them to the given situation. <br> - Indicate how various concepts can be applied to other disciplines. |  |
| :---: | :---: | :---: |
| 34 B.E.S.T Mathematics Benchmarks |  | Textbook Section |
| MA.7.AR.1.1: | Apply properties of operations to add and subtract linear expressions with rational coefficients. <br> Clarifications: <br> Clarification 1: Instruction includes linear expressions in the form $\mathrm{ax} \pm \mathrm{b}$ or $\mathrm{b} \pm \mathrm{ax}$, where a and b are rational numbers. <br> Clarification 2: Refer to Properties of Operations, Equality and Inequality (Appendix D). | 4.1-4.8 |
| MA.7.AR.1.2: | Determine whether two linear expressions are equivalent. <br> Clarifications: <br> Clarification 1: Instruction includes using properties of operations accurately and efficiently. <br> Clarification 2: Instruction includes linear expressions in any form with rational coefficients. <br> Clarification 3: Refer to Properties of Operations, Equality and Inequality (Appendix D). | 4.2, 4.4, 4.5, 4.8 |
| MA.7.AR.2.1: | Write and solve one-step inequalities in one variable within a mathematical context and represent solutions algebraically or graphically. <br> Clarifications: <br> Clarification 1: Instruction focuses on the properties of inequality. Refer to Properties of Operations, Equality and Inequality (Appendix D). <br> Clarification 2: Instruction includes inequalities in the forms ; ; $\mathrm{x} \pm \mathrm{p}>\mathrm{q}$ and $\mathrm{p} \pm \mathrm{x}>\mathrm{q}$, where p and q are specific rational numbers and any inequality symbol can be represented. <br> Clarification 3: Problems include inequalities where the variable may be on either side of the inequality symbol. | 5.3, 5.4 |

| MA.7.AR.2.2: | Write and solve two-step equations in one variable within a mathematical or real-world context, where all terms are rational numbers. <br> Clarifications: <br> Clarification 1: Instruction focuses the application of the properties of equality. Refer to Properties of Operations, Equality and Inequality (Appendix D). <br> Clarification 2: Instruction includes equations in the forms $\mathrm{px} \pm \mathrm{q}=\mathrm{r}$ and $\mathrm{p}(\mathrm{x} \pm \mathrm{q})=\mathrm{r}$, where $\mathrm{p}, \mathrm{q}$ and r are specific rational numbers. <br> Clarification 3: Problems include linear equations where the variable may be on either side of the equal sign. | $15.1,5.2$ |
| :---: | :---: | :---: |
| MA.7.AR.3.1: | Apply previous understanding of percentages and ratios to solve multi-step real-world percent problems. Clarifications: <br> Clarification 1: Instruction includes discounts, markups, simple interest, tax, tips, fees, percent increase, percent decrease and percent error. | 3.1-3.6 |
| MA.7.AR.3.2: | Apply previous understanding of ratios to solve real-world problems involving proportions. | 2.1, 3.2-3.6 |
| MA.7.AR.3.3: | Solve mathematical and real-world problems involving the conversion of units across different measurement systems. | . 4 |
| MA.7.AR.4.1: | Determine whether two quantities have a proportional relationship by examining a table, graph or written description. <br> Clarifications: <br> Clarification 1: Instruction focuses on the connection to ratios and on the constant of proportionality, which is the ratio between two quantities in a proportional relationship. | , 2.2, 2.3, 2.5 |
| MA.7.AR.4.2: | Determine the constant of proportionality within a mathematical or real-world context given a table, graph or written description of a proportional relationship. | 2.2, 2.3, 2.5 |
| MA.7.AR.4.3: | Given a mathematical or real-world context, graph proportional relationships from a table, equation or a written description. <br> Clarifications: <br> Clarification 1: Instruction includes equations of proportional relationships in the form of $\mathrm{y}=\mathrm{px}$, where p is the constant of proportionality. |  |
| MA.7.AR.4.4: | Given any representation of a proportional relationship, translate the representation to a written description, table or equation. <br> Clarifications: <br> Clarification 1: Given representations are limited to a written description, graph, table or equation. <br> Clarification 2: Instruction includes equations of proportional relationships in the form of $\mathrm{y}=\mathrm{px}$, where p is the constant of proportionality. | 2.3, 2.5 |

| MA.7.AR.4.5: | Solve real-world problems involving proportional relationships. | $3.1,3.2$, |
| :--- | :--- | :--- |
| MA.7.DP.1.1: | Determine an appropriate measure of center or measure of variation to summarize numerical data, <br> represented numerically or graphically, taking into consideration the context and any outliers. <br> Clarifications: <br> Clarification 1: Instruction includes recognizing whether a measure of center or measure of variation is <br> appropriate and can be justified based on the given context or the statistical purpose. <br> Clarification 2: Graphical representations are limited to histograms, line plots, box plots and <br> stem-and-leaf plots. <br> Clarification 3: The measure of center is limited to mean and median. The measure of variation is limited <br> to range and interquartile range. | 6.4 |
| MA.7.DP.1.2: | Given two numerical or graphical representations of data, use the measure(s) of center and measure(s) of <br> variability to make comparisons, interpret results and draw conclusions about the two populations. <br> Clarifications: <br> Clarification 1: Graphical representations are limited to histograms, line plots, box plots and <br> stem-and-leaf plots. <br> Clarification 2: The measure of center is limited to mean and median. The measure of variation is limited <br> to range and interquartile range. |  |
| MA.7.DP.1.3: | Given categorical data from a random sample, use proportional relationships to make predictions about a <br> population. | 6.2 |
| MA.7.DP.1.4: | Use proportional reasoning to construct, display and interpret data in circle graphs. <br> Clarifications: <br> Clarification 1: Data is limited to no more than 6 categories. | 6.1 |
| MA.7.DP.1.5: | Given a real-world numerical or categorical data set, choose and create an appropriate graphical <br> representation. <br> Clarifications: <br> Clarification 1: Graphical representations are limited to histograms, bar charts, circle graphs, line plots, <br> box plots and stem-and-leaf plots. | 6.6 |
|  | Determine the sample space for a simple experiment. <br> Clarifications: <br> Clarification 1: Simple experiments include tossing a fair coin, rolling a fair die, picking a card randomly <br> from a deck, picking marbles randomly from a bag and spinning a fair spinner. | 7.1 <br> MA.7.DP.2.1: |

| MA.7.DP.2.2: | Given the probability of a chance event, interpret the likelihood of it occurring. Compare the probabilities of chance events. <br> Clarifications: <br> Clarification 1: Instruction includes representing probability as a fraction, percentage or decimal between 0 and 1 with probabilities close to 1 corresponding to highly likely events and probabilities close to 0 corresponding to highly unlikely events. <br> Clarification 2: Instruction includes P (event) notation. <br> Clarification 3: Instruction includes representing probability as a fraction, percentage or decimal. | 7.1, 7.2 |
| :---: | :---: | :---: |
| MA.7.DP.2.3: | Find the theoretical probability of an event related to a simple experiment. <br> Clarifications: <br> Clarification 1: Instruction includes representing probability as a fraction, percentage or decimal. <br> Clarification 2: Simple experiments include tossing a fair coin, rolling a fair die, picking a card randomly from a deck, picking marbles randomly from a bag and spinning a fair spinner. | 7.2 |
| MA.7.DP.2.4: | Use a simulation of a simple experiment to find experimental probabilities and compare them to theoretical probabilities. <br> Clarifications: <br> Clarification 1: Instruction includes representing probability as a fraction, percentage or decimal. Clarification 2: Instruction includes recognizing that experimental probabilities may differ from theoretical probabilities due to random variation. As the number of repetitions increases experimental probabilities will typically better approximate the theoretical probabilities. <br> Clarification 3: Experiments include tossing a fair coin, rolling a fair die, picking a card randomly from a deck, picking marbles randomly from a bag and spinning a fair spinner. | 7.3, 7.4 |
| MA.7.GR.1.1: | Apply formulas to find the areas of trapezoids, parallelograms and rhombi. <br> Clarifications: <br> Clarification 1: Instruction focuses on the connection from the areas of trapezoids, parallelograms and rhombi to the areas of rectangles or triangles. <br> Clarification 2: Within this benchmark, the expectation is not to memorize area formulas for trapezoids, parallelograms and rhombi. | 8.1 |
| MA.7.GR.1.2: | Solve mathematical or real-world problems involving the area of polygons or composite figures by decomposing them into triangles or quadrilaterals. <br> Clarifications: <br> Clarification 1: Within this benchmark, the expectation is not to find areas of figures on the coordinate plane or to find missing dimensions. | 8.2 |

| MA.7.GR.1.3: | Explore the proportional relationship between circumferences and diameters of circles. Apply a formula <br> for the circumference of a circle to solve mathematical and real-world problems. <br> Clarifications: <br> Clarification 1: Instruction includes the exploration and analysis of circular objects to examine the <br> proportional relationship between circumference and diameter and arrive at an approximation of pi $(\pi)$ as <br> the constant of proportionality. <br> Clarification 2: Solutions may be represented in terms of pi $(\pi)$ or approximately. | 8. |
| :--- | :--- | :--- |
| MA.7.GR.1.4: | Explore and apply a formula to find the area of a circle to solve mathematical and real-world problems. <br> Clarifications: <br> Clarification 1: Instruction focuses on the connection between formulas for the area of a rectangle and <br> the area of a circle. <br> Clarification 2: Problem types include finding areas of fractional parts of a circle. <br> Clarification 3: Solutions may be represented in terms of pi $(\pi)$ or approximately. |  |
| MA.7.GR.1.5: | Solve mathematical and real-world problems involving dimensions and areas of geometric figures, <br> including scale drawings and scale factors. <br> Clarifications: <br> Clarification 1: Instruction focuses on seeing the scale factor as a constant of proportionality between <br> lorresponding lengths in the scale drawing and the original object. <br> Clarification 2: Instruction includes the understanding that if the scaling factor is k, then the constant of <br> proportionality between corresponding areas is $\mathrm{k}^{2}$. <br> Clarification 3: Problem types include finding the scale factor given a set of dimensions as well as <br> finding dimensions when given a scale factor. | 8.5 |
|  | Given a mathematical or real-world context, find the surface area of a right circular cylinder using the <br> figure's net. <br> Clarifications: <br> Clarification 1: Instruction focuses on representing a right circular cylinder with its net and on the <br> connection between surface area of a figure and its net. <br> Clarification 2: Within this benchmark, the expectation is to find the surface area when given a net or <br> when given a three-dimensional figure. <br> Clarification 3: Within this benchmark, the expectation is not to memorize the surface area formula for a <br> right circular cylinder. <br> Clarification 4: Solutions may be represented in terms of pi $(\pi)$ or approximately. | 8.6 |
| MA.7.GR.2.1: |  |  |

| MA.7.GR.2.2: | Solve real-world problems involving surface area of right circular cylinders. <br> Clarifications: <br> Clarification 1: Within this benchmark, the expectation is not to memorize the surface area formula for a right circular cylinder or to find radius as a missing dimension. <br> Clarification 2: Solutions may be represented in terms of pi $(\pi)$ or approximately. | 8.6 |
| :---: | :---: | :---: |
| MA.7.GR.2.3: | Solve mathematical and real-world problems involving volume of right circular cylinders. <br> Clarifications: <br> Clarification 1: Within this benchmark, the expectation is not to memorize the volume formula for a right circular cylinder or to find radius as a missing dimension. <br> Clarification 2: Solutions may be represented in terms of pi $(\pi)$ or approximately. | $\left.\right\|^{8.7}$ |
| MA.7.NSO.1.1: | Know and apply the Laws of Exponents to evaluate numerical expressions and generate equivalent numerical expressions, limited to whole-number exponents and rational number bases. <br> Clarifications: <br> Clarification 1: Instruction focuses on building the Laws of Exponents from specific examples. Refer to the K-12 Formulas (Appendix E) for the Laws of Exponents. <br> Clarification 2: Problems in the form must result in a whole-number value for p . | 1.5, 1.6 |
| MA.7.NSO.1.2: | Rewrite rational numbers in different but equivalent forms including fractions, mixed numbers, repeating decimals and percentages to solve mathematical and real-world problems. | 1.1, 3.1 |
| MA.7.NSO.2.1: | Solve mathematical problems using multi-step order of operations with rational numbers including grouping symbols, whole-number exponents and absolute value. <br> Clarifications: <br> Clarification 1: Multi-step expressions are limited to 6 or fewer steps. | 1.3, 1.4, 1.7 |
| MA.7.NSO.2.2: | Add, subtract, multiply and divide rational numbers with procedural fluency. | 1.2, 1.3, 1.4, 1.7 |
| MA.7.NSO.2.3: | Solve real-world problems involving any of the four operations with rational numbers. Clarifications: <br> Clarification 1: Instruction includes using one or more operations to solve problems. | $1.2,1.3,1.4,1.7$ |
| 6 English Language Arts Benchmarks and 2 English Language Development Benchmarks |  | Textbook Section |
| ELA.K12.EE.1.1: | Cite evidence to explain and justify reasoning. <br> Clarifications: <br> 6-8 Students continue with previous skills and use a style guide to create a proper citation. | Incorporated Throughout |
| ELA.K12.EE.2.1: | Read and comprehend grade-level complex texts proficiently. <br> Clarifications: <br> See Text Complexity for grade-level complexity bands and a text complexity rubric. | Incorporated Throughout |

| ELA.K12.EE.3.1: | Make inferences to support comprehension. <br> Clarifications: <br> Students will make inferences before the words infer or inference are introduced. Kindergarten students <br> will answer questions like "Why is the girl smiling?" or make predictions about what will happen based <br> on the title page. Students will use the terms and apply them in 2nd grade and beyond. | Incorporated <br> Throughout |
| :--- | :--- | :--- | :--- |
| ELA.K12.EE.4.1: | Use appropriate collaborative techniques and active listening skills when engaging in discussions in a <br> variety of situations. <br> Clarifications: <br> In grades 3-12, students engage in academic conversations discussing claims and justifying their <br> reasoning, refining and applying skills. Students build on ideas, propel the conversation, and support <br> claims and counterclaims with evidence. | Incorporated <br> Throughout |
|  | Use the accepted rules governing a specific format to create quality work. <br> Clarifications: <br> Students will incorporate skills learned into work products to produce quality work. For students to <br> Encorporate these skills appropriately, they must receive instruction. A 3rd grade student creating a poster <br> board display must have instruction in how to effectively present information to do quality work. | Throughout |
|  | Use appropriate voice and tone when speaking or writing. <br> Clarifications: <br> In kindergarten and 1st grade, students learn the difference between formal and informal language. For <br> example, the way we talk to our friends differs from the way we speak to adults. In 2nd grade and <br> beyond, students practice appropriate social and academic language to discuss texts. | Throughout |
| ELA.K12.EE.6.1: |  |  |
